

```
<!doctype html>
<html>
<body>
<script type="text/javascript">
  async function test(x) {
    return x * 2;
  }

  await test(5);
</script>
</body>
</html>
```

ASYNC / AWAIT RULES

- code can be paused waiting for an Async Function with await
- await returns whatever the async function returns when it is done.
- await can only be used inside an async function.
- exceptions are swallowed by Promise.catch()
